

Checkpoint I

How does the web work

we can summarize the functioning of the web in four steps :

What do you need to be a web developer?

There are 5 simple steps to become a web developer :

- Learn web development fundamentals
- Choose a development specialization
- Learn key programming languages for web development
- Work on projects to develop your Web Developer skills
- Build your portfolio

The reason why i wanna be a web developer

As a freshly graduated i was hesitated about my next step especially that i wasn't satisfied with my previous field of studies. So i searched for a new domain where i can express my self creatively on the internet, something challenging that allows me to take all the ideas i have in my head and make them come to life.

And i found that web development can give me all that. Deciding a career will always be a difficult decision, especially when you're unsure of what the outcome will be after you've invested time and money into learning a new trade. Fortunately, the high demand, easy-to-learn, fun-to-experience life of a web developer is always a great choice for someone ready to have an exciting career in code.
